Tremolino

Owner's Manual

Our Tremolino is an effect pedal with finesse, such as the continuously adjustable generator for more flexibility. The XXX-knob is for further influence of the modulation.

Power supply– The Tremolino runs on 9 VDC by a battery inside the pedal or with a proper power supply unit. Please be careful when opening the bottom of the pedal for battery change.

If you do not like to use this pedal anymore and would like to dispose it, please send it back to us. We will take care of the proper recycling.
